RESIDENCE ELEVATORS

A. I. A. FILE No. 33-B
ATLANTIC ELEVATOR CO., INC.

by ATLANTIC

The ATLANTEVATOR, JR.

CAPACITY 350 LBS.

The ATLANTEVATOR, JR. is an electric push button elevator designed especially to fit into limited spaces. It requires no clearance above the cab at the top landing, and may be installed in an enclosed shaftway . . . a closet . . . the corner of a room . . . or just beside the stairway as shown in the illustration.

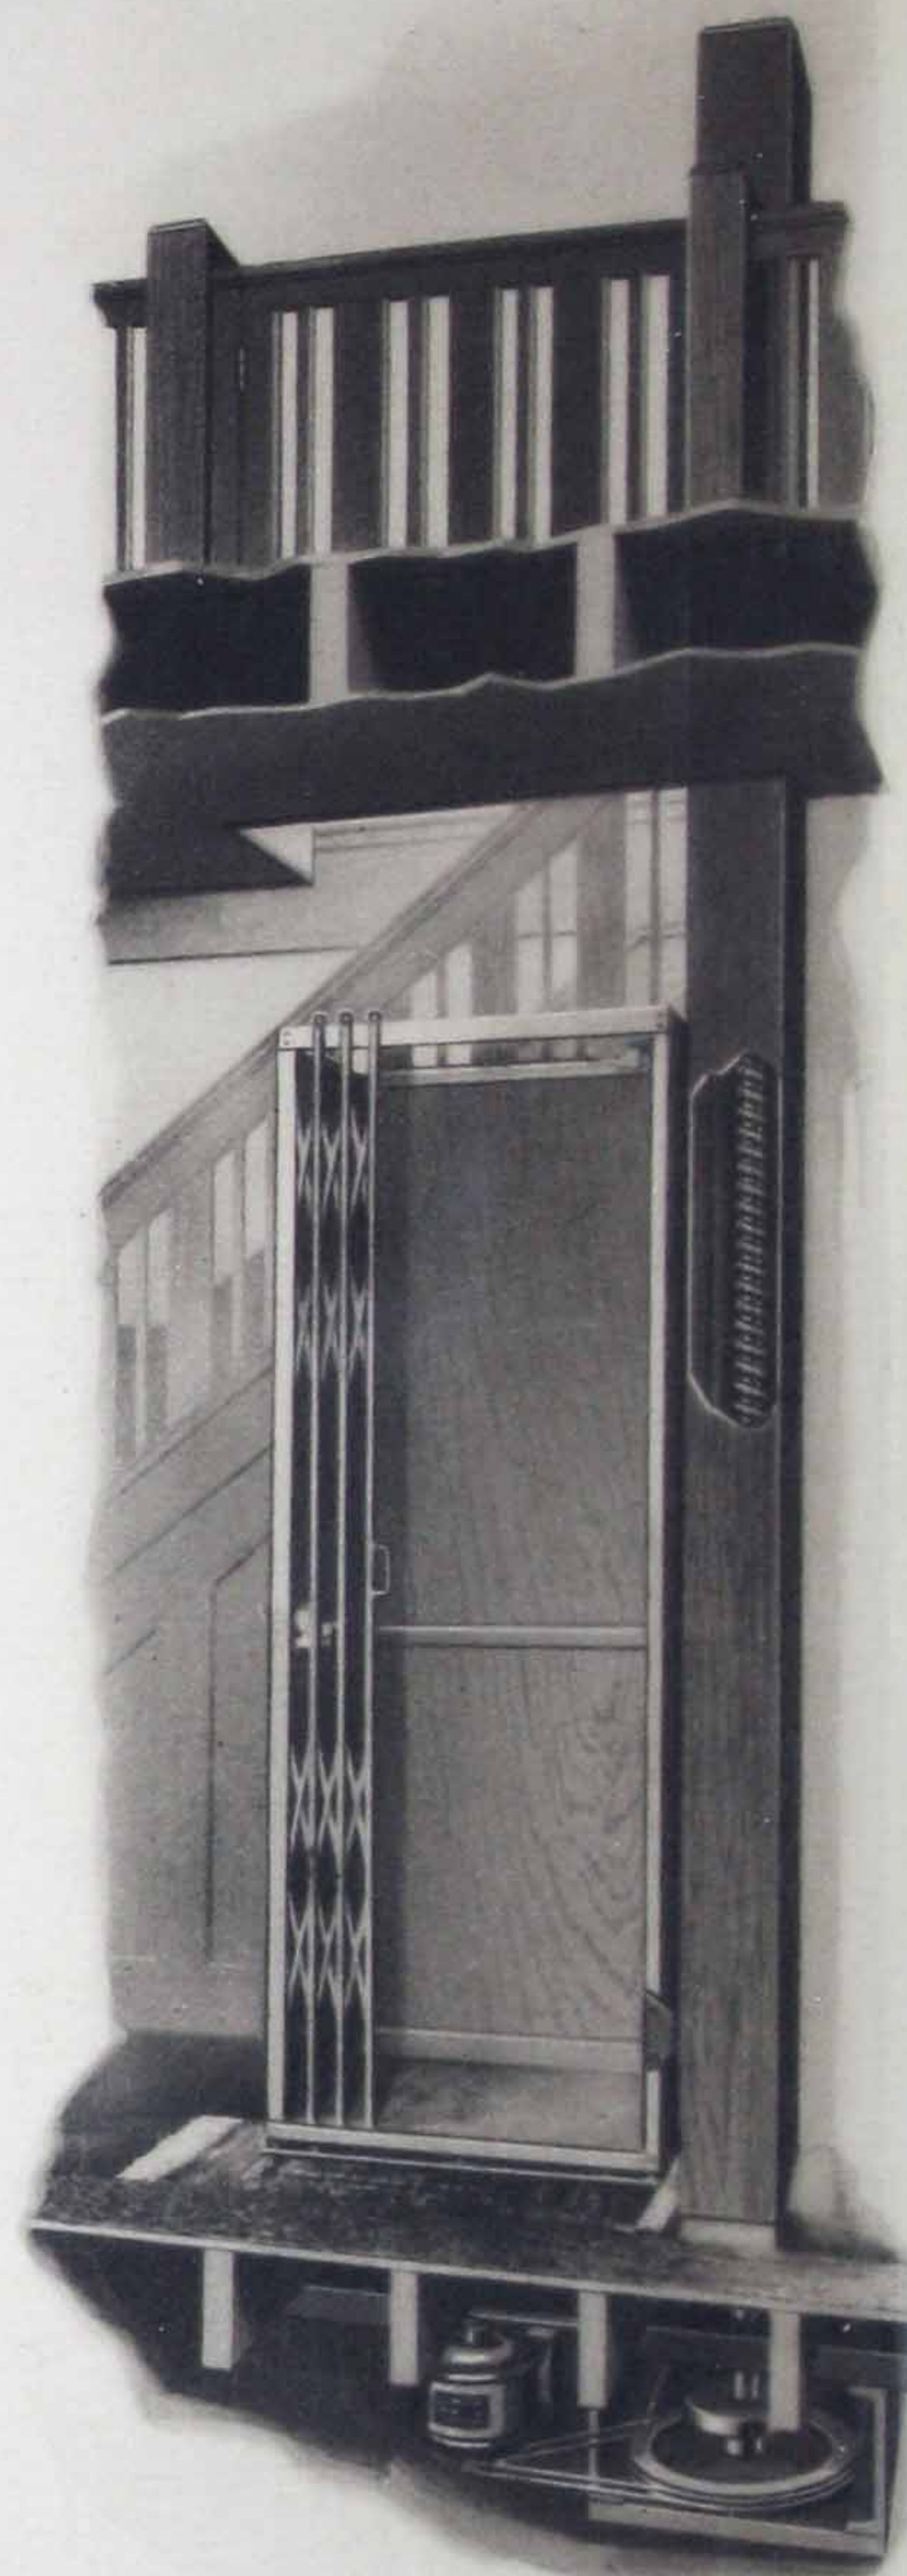

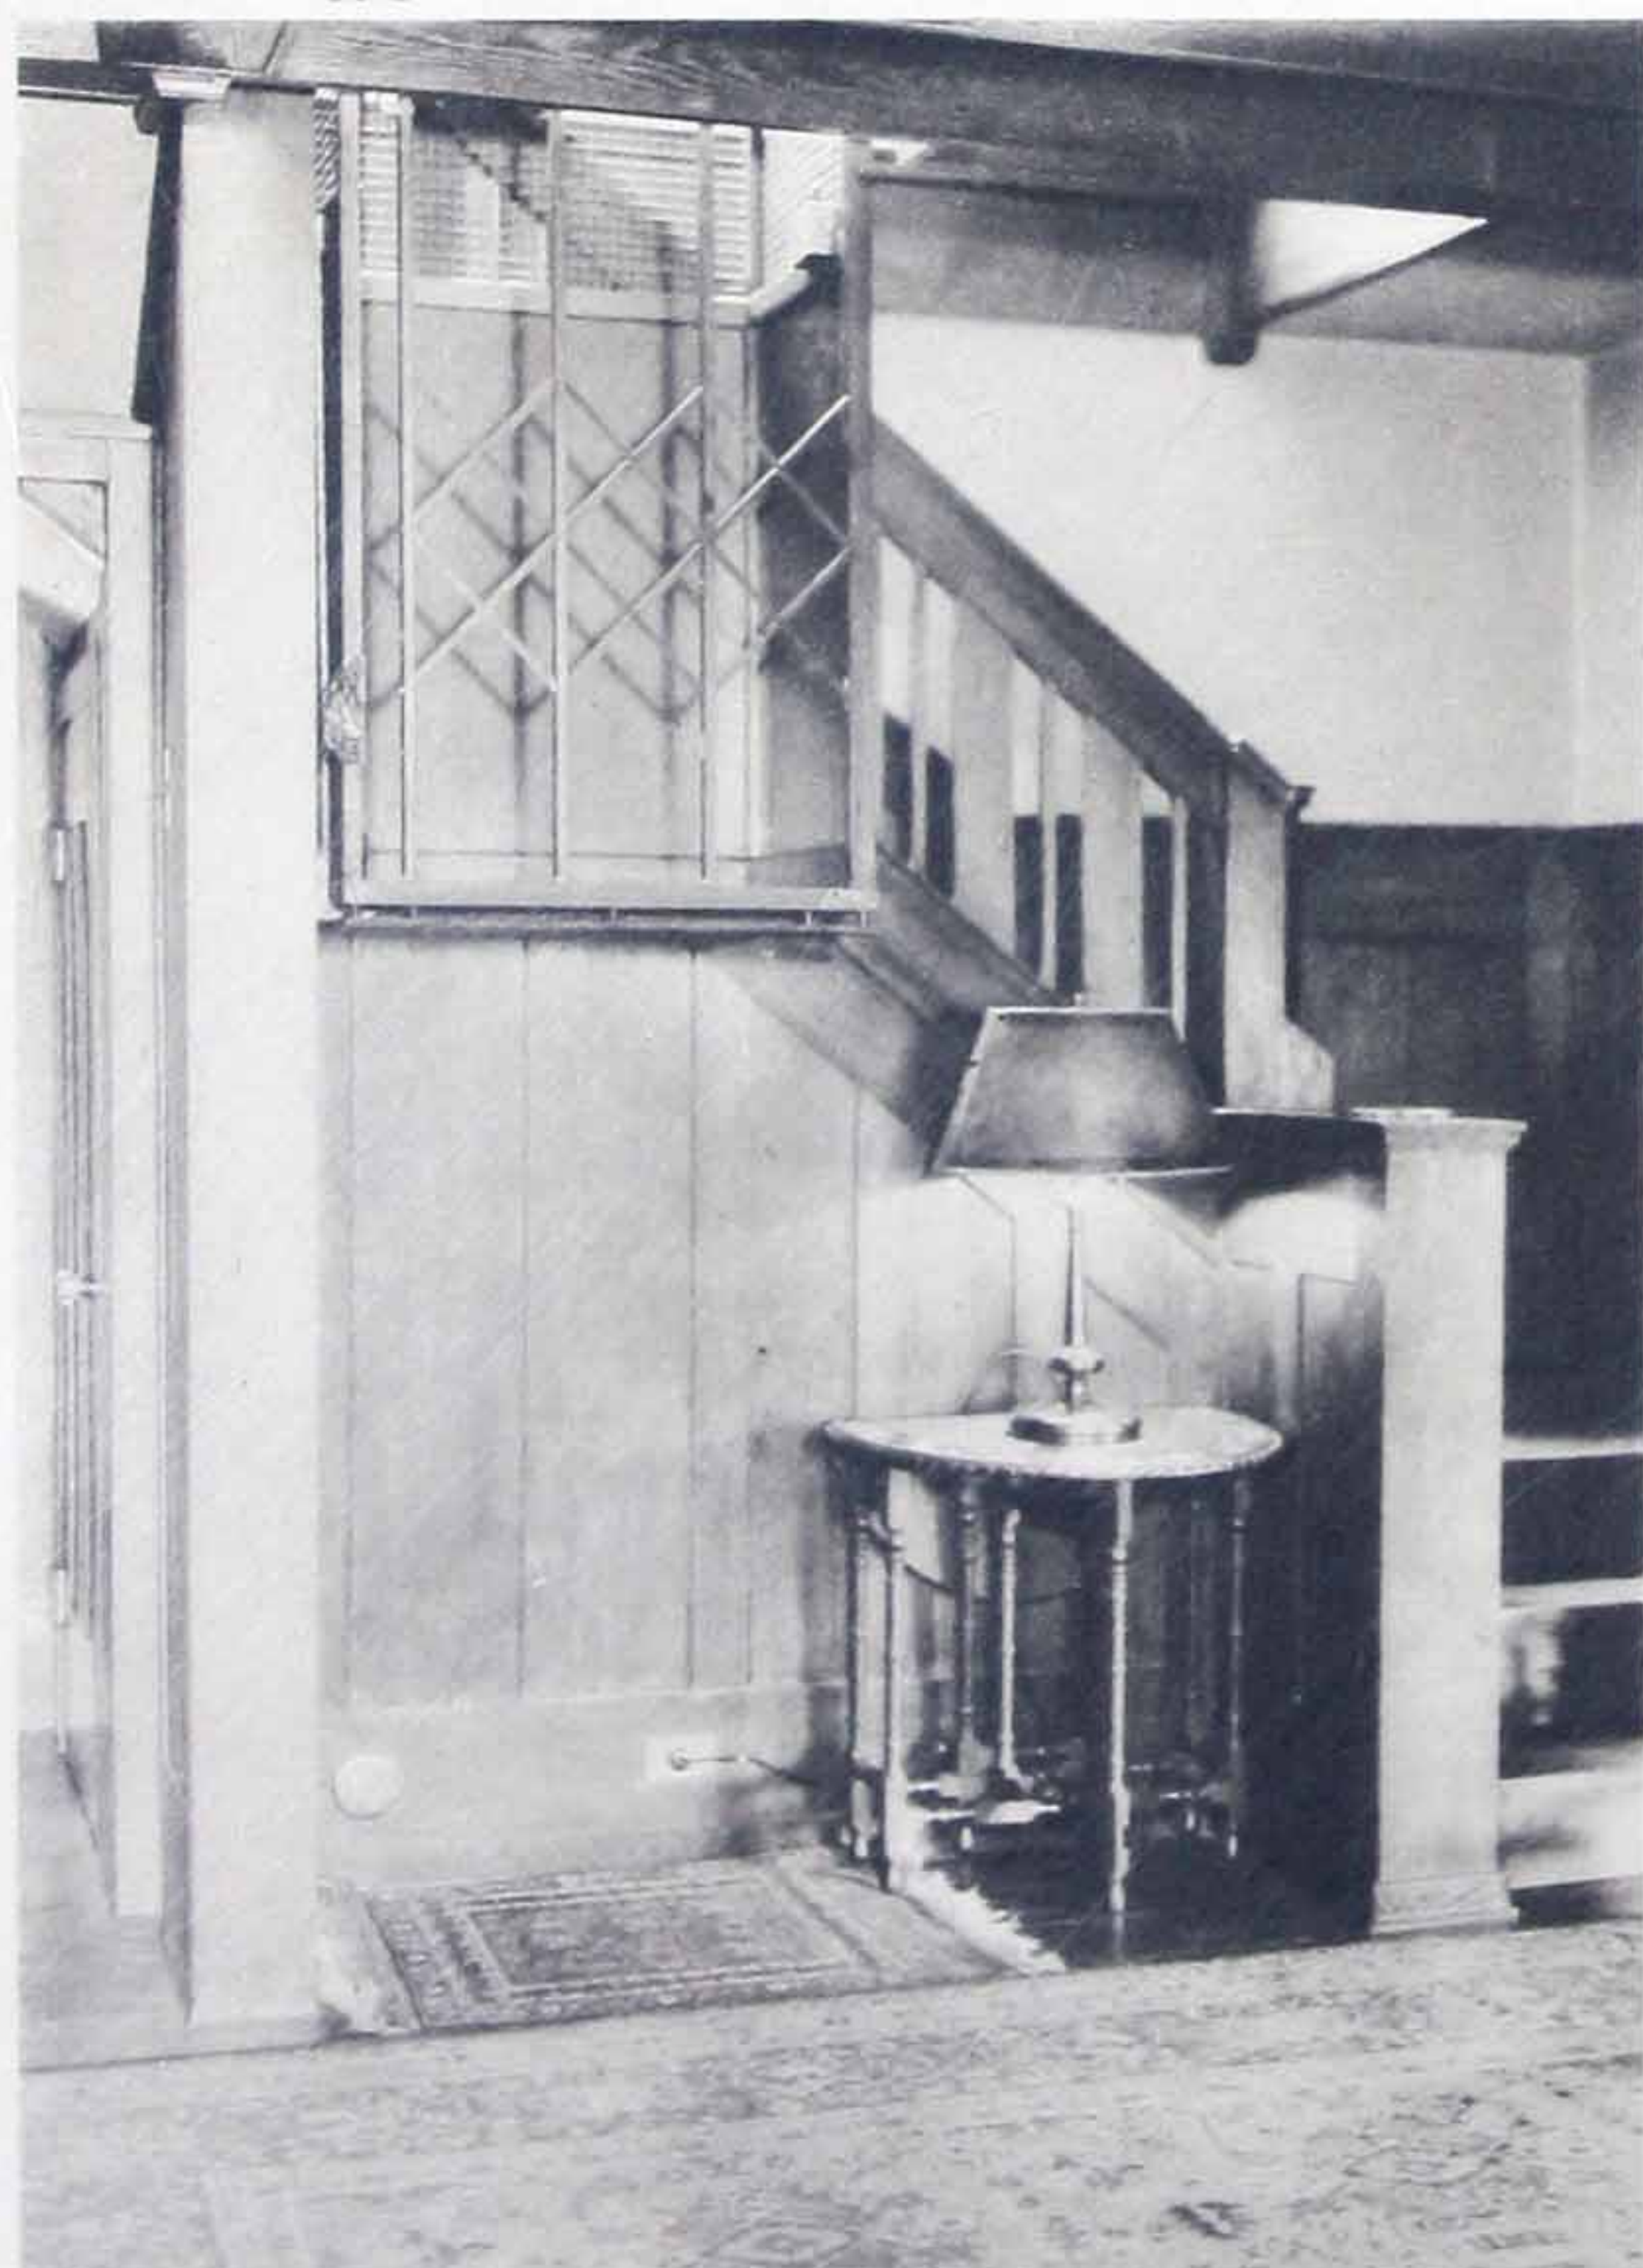

The size of the elevator cab is varied to suit the space available. No pit is necessary . . . when the car is up, one would hardly know there was an elevator in the house. Furthermore, it is arranged so that the car cannot descend to injure anything that may be under it.

The machine is a vertical screw . . . with all its inherent safety. The screw is suspended from the top of the combination guide and housing which hides it from view, and extends below the first floor to the cellar ceiling where the driving

mechanism is located. The pressure of a button starts this mechanism, which in turn rotates the screw and raises or lowers the car by a threaded sleeve attached to the car platform. The car is supported and propelled by the screw and the overhung load is completely assumed by the guide rails. Should the power fail at any time, the elevator may be lowered by hand.

Quiet . . . rugged . . . it requires practically no attention, and the operating costs are almost negligible.

And this safe, modern, simple, unusually desirable elevator may be purchased for as low as \$700.00 plus freight and installation costs.

Safe ~ Convenient

In this folder ATLANTIC offers a group of electric elevators especially designed for residences. These elevators cover the requirements of the entire residential field. . . . Each elevator described is built to provide a particular type of personal service. . . . Each elevator is outstanding in its field for its appointments, its sturdy and efficient construction . . . and with any one of them in your home you will enjoy a permanent vacation from stair climbing.

These elevators are engineered and built by the same personnel that has installed thousands of the finest elevators throughout the United States. The ATLANTIC ELEVATOR COMPANY has been manufacturing elevators for over forty years and has a wealth of experience in constructing all types from the lowly freight to the most refined and ultra-modern high-speed gearless traction passenger elevator.

ATLANTIC has specialized in residential elevators, having made many installations in the finest homes. Further information concerning any of these elevators . . . also complete specifications . . . will be gladly furnished upon request.

Patents Pending.

An Investment in Health

The ATLANTEVATOR

CAPACITY 450 LBS.

Many residences require an elevator large enough to carry three people . . . or an invalid chair with attendant . . . an elevator that is just like those in the finest public buildings except of smaller proportions. The ATLANTEVATOR embodies all of these features.

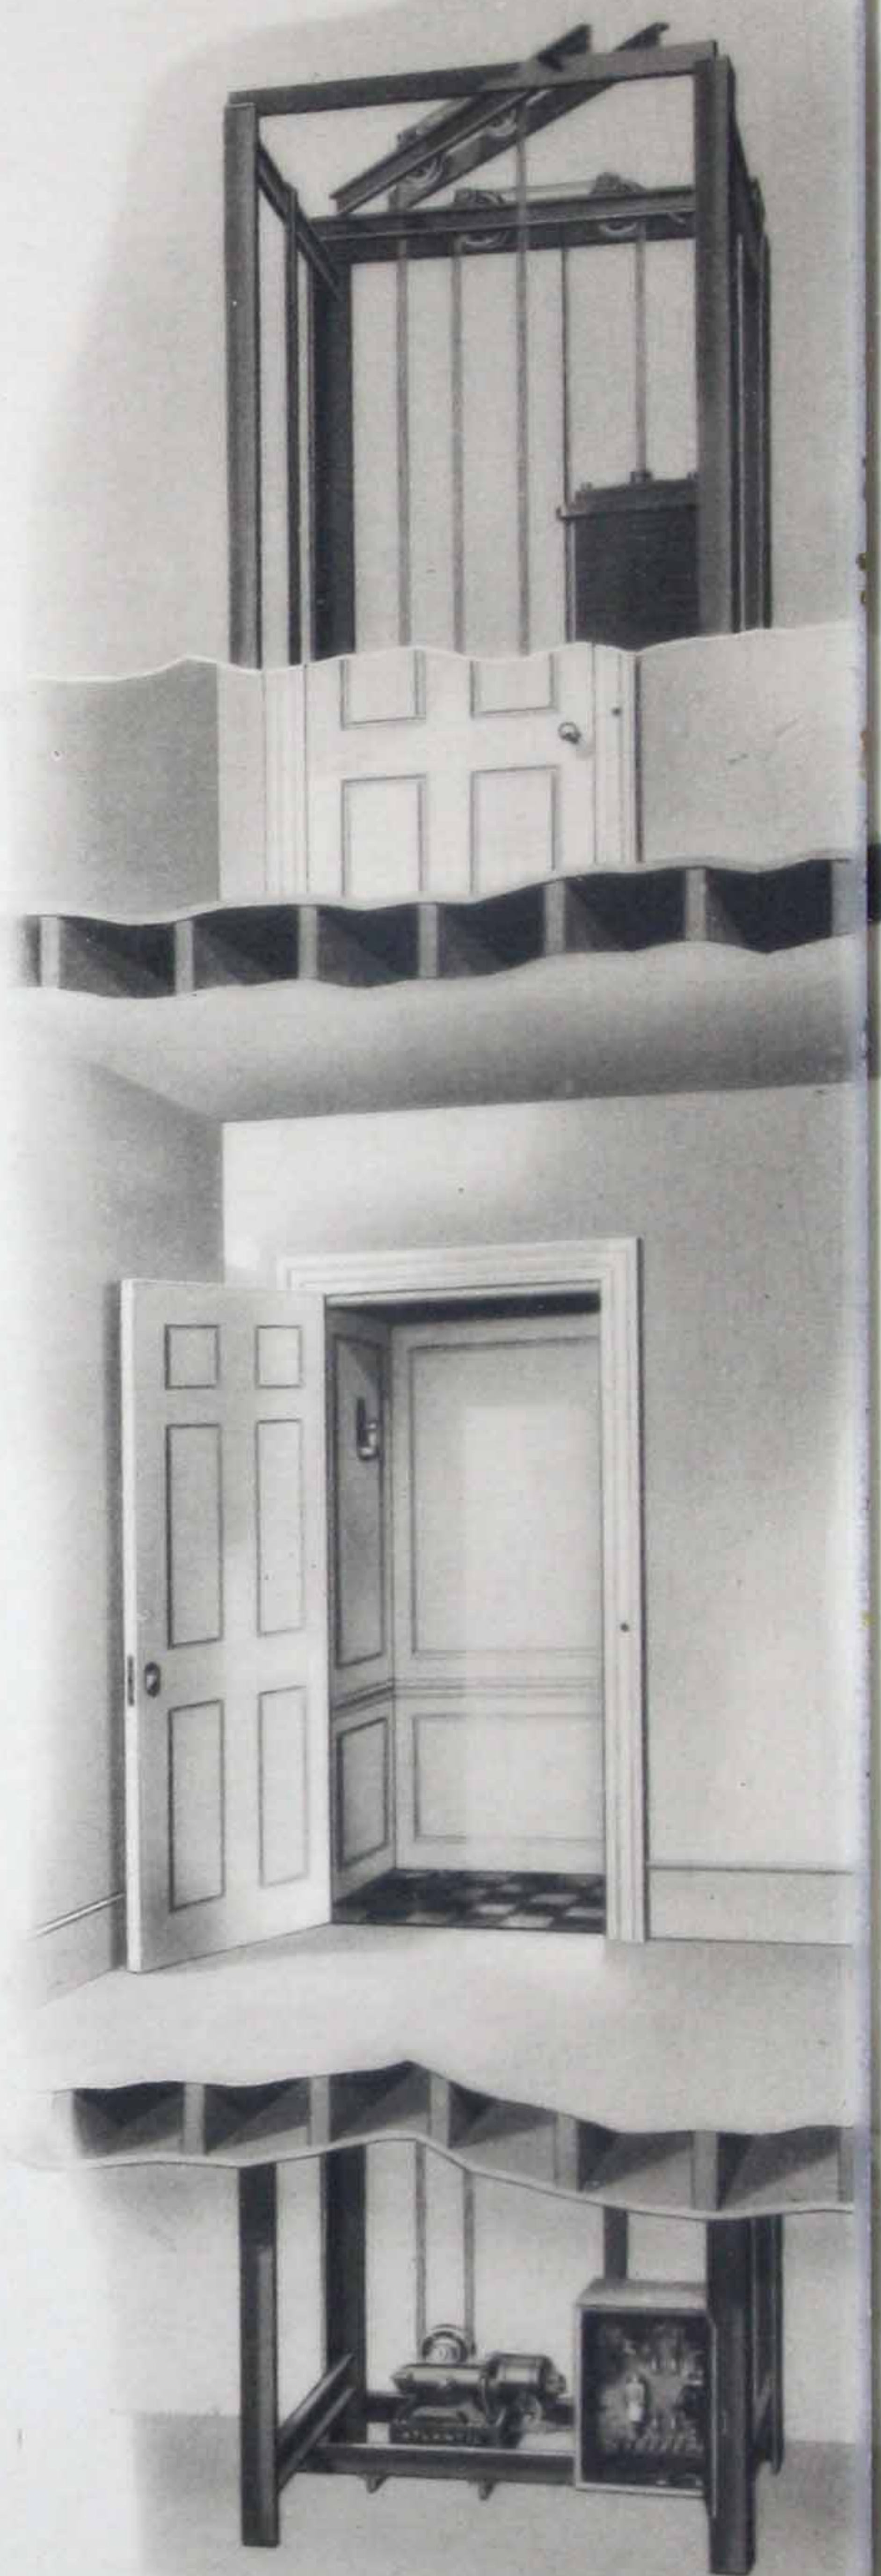

Its cab is of wood finished to blend with the finest interior furnishings. The operating push buttons and light fixtures are beautifully appointed. The control is so simple that even a child can use it with perfect safety. Installed in an enclosed shaftway . . . with inter-locked doors at each opening . . . it will not move unless all doors are closed and locked. Then a touch of a button either calls it or sends it quietly and surely where desired.

The machine is the most modern of its kind . . . U-grooved, double wrap traction type with electric brake and motor . . . so lubricated that it requires less attention than an electric refrigerator. It is almost noiseless. The car and counterweight are suspended from four cables having a high factor of safety . . . also the car is equipped with a device that immediately grips the steel guides and supports the car should an emergency arise. All of this equipment is entirely supported by a steel tower which extends the full height of travel and rests upon footings in the basement, thus relieving the building of all strain.

Because no two residences are alike the size has not been standardized. We recommend a car about 3'0" x 4'0" which requires a shaftway about 4'6" x 5'6". Only 10'6" headroom is required for the installation. The pit is 10" deep with space for machine adjacent or below.

Another unusual feature in the ATLANTEVATOR is that it operates upon the usual lighting current.

After considering all of its remarkable features, it is interesting to note that it may be purchased for as low a price as \$1200 plus freight and installation costs.

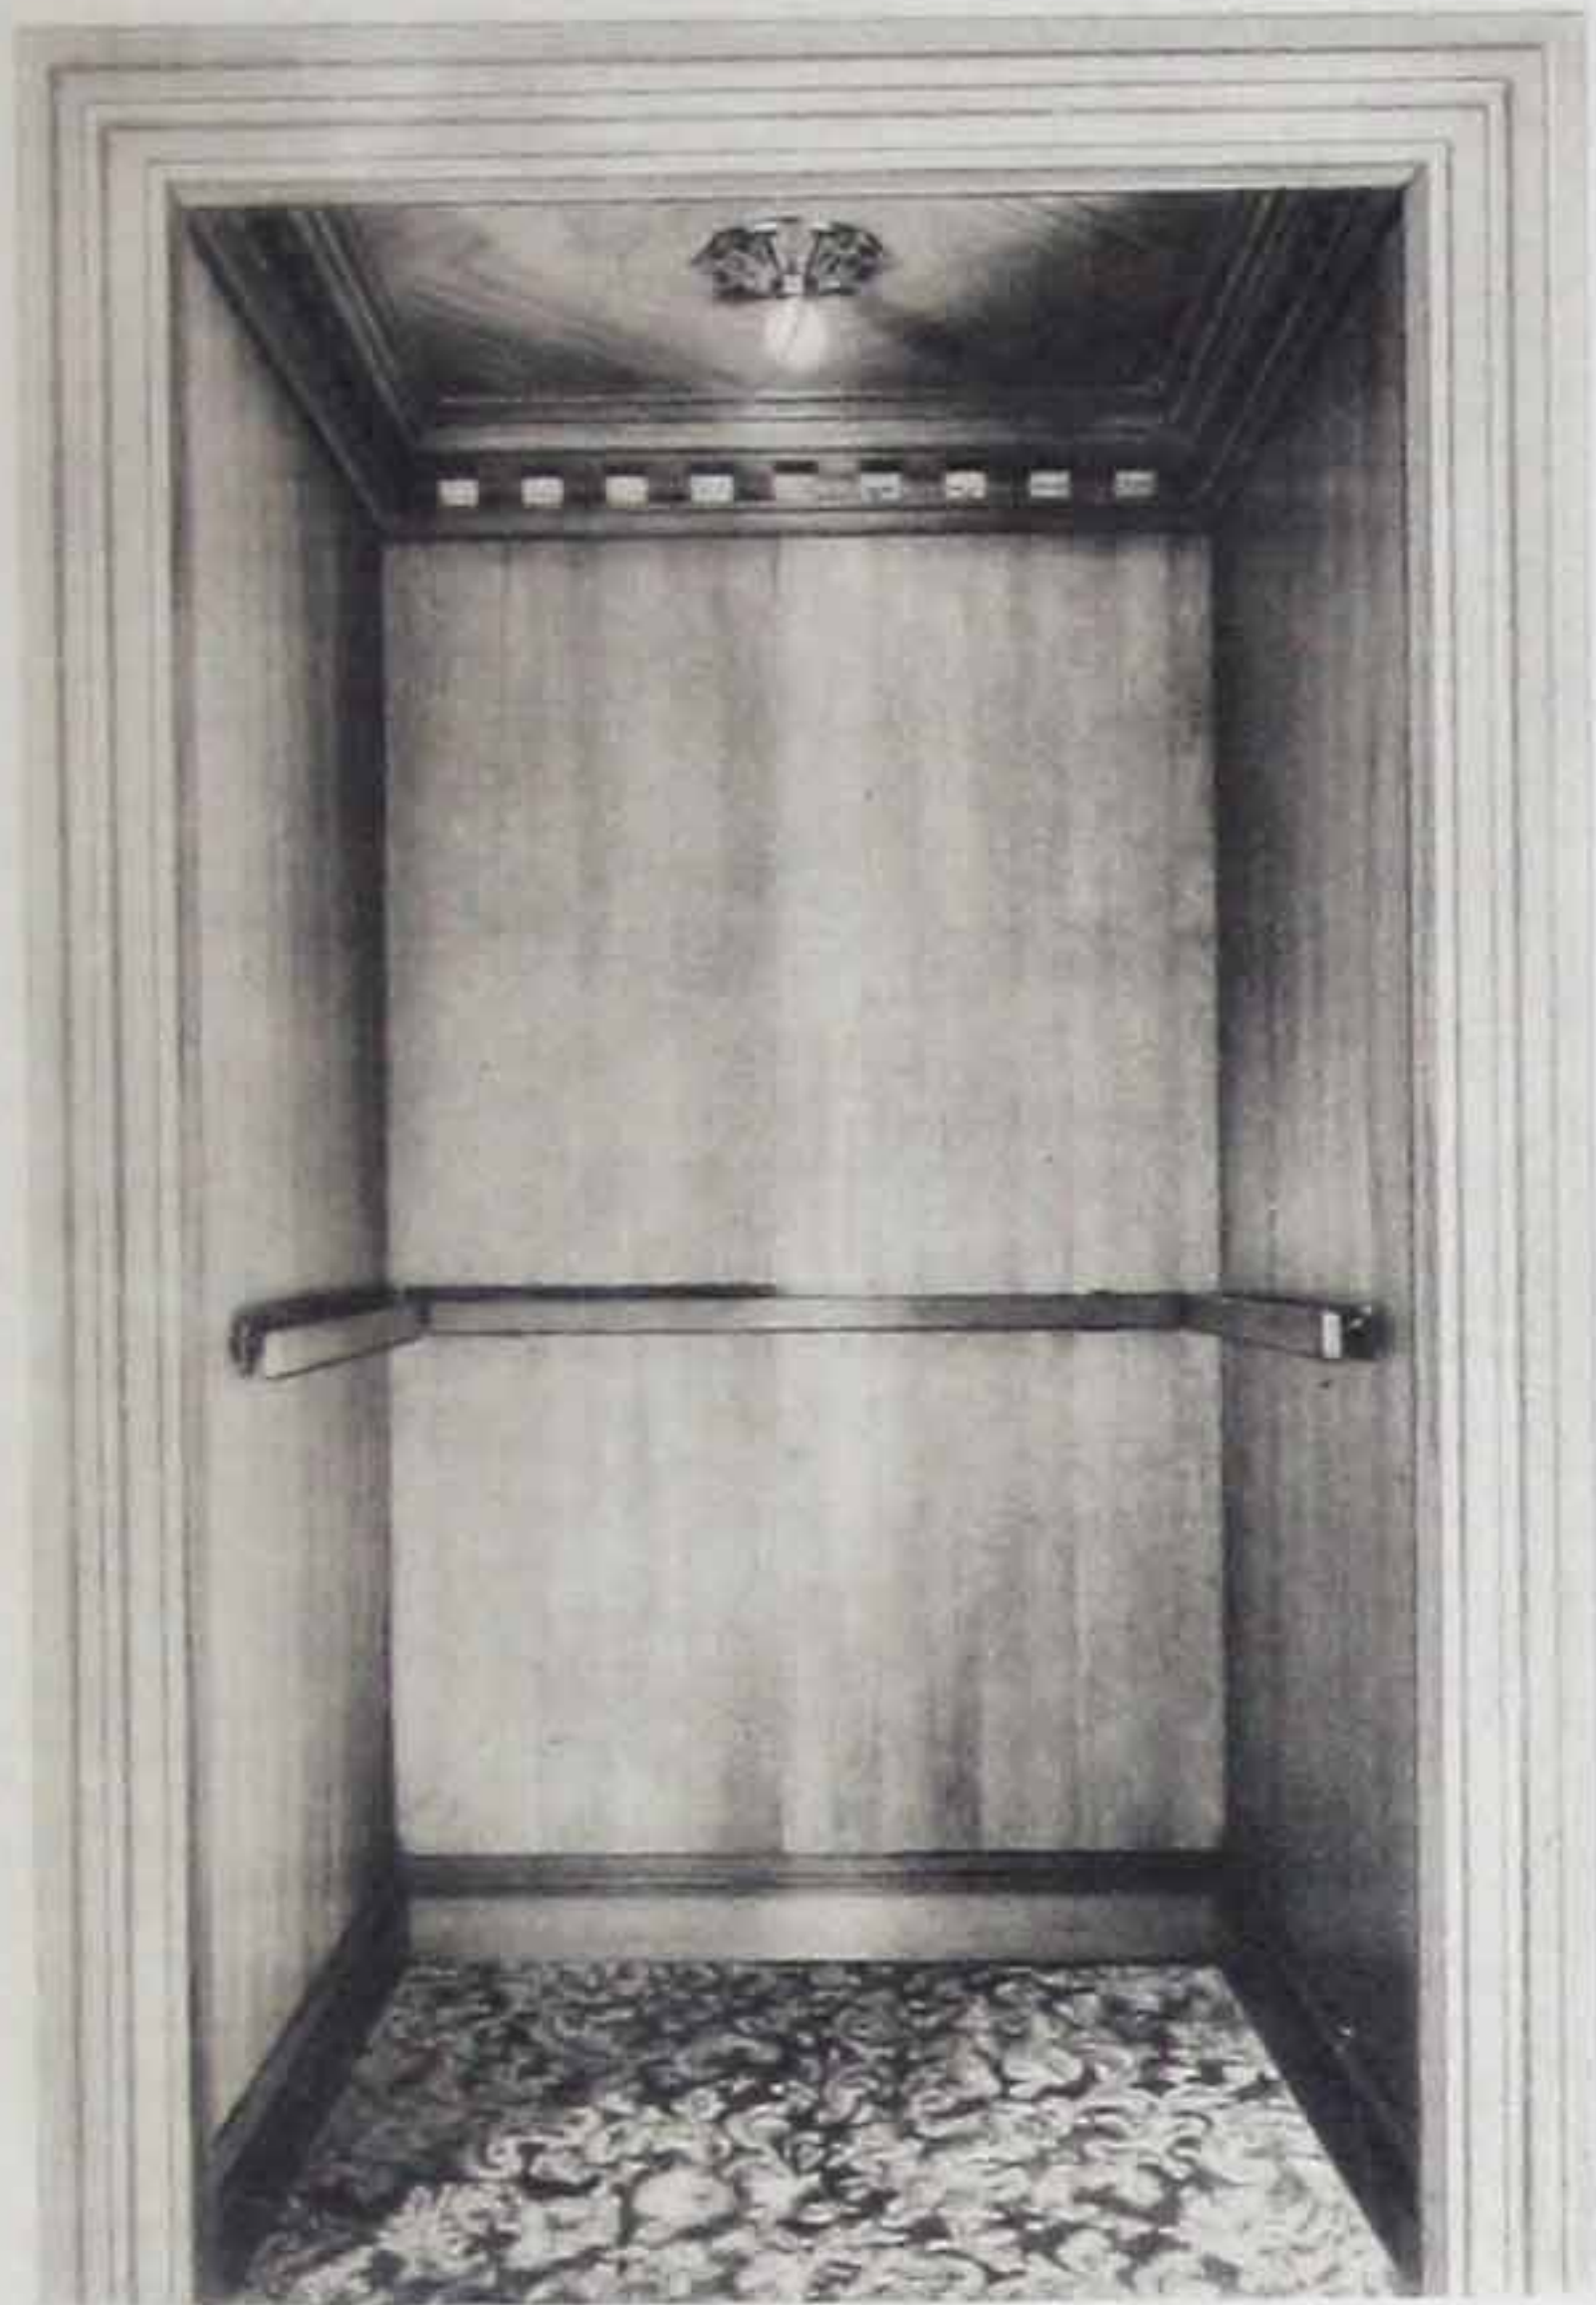

Up or Down ~ Just Push a Button

The ATLANTIC

CAPACITY 1000 LBS. & MORE

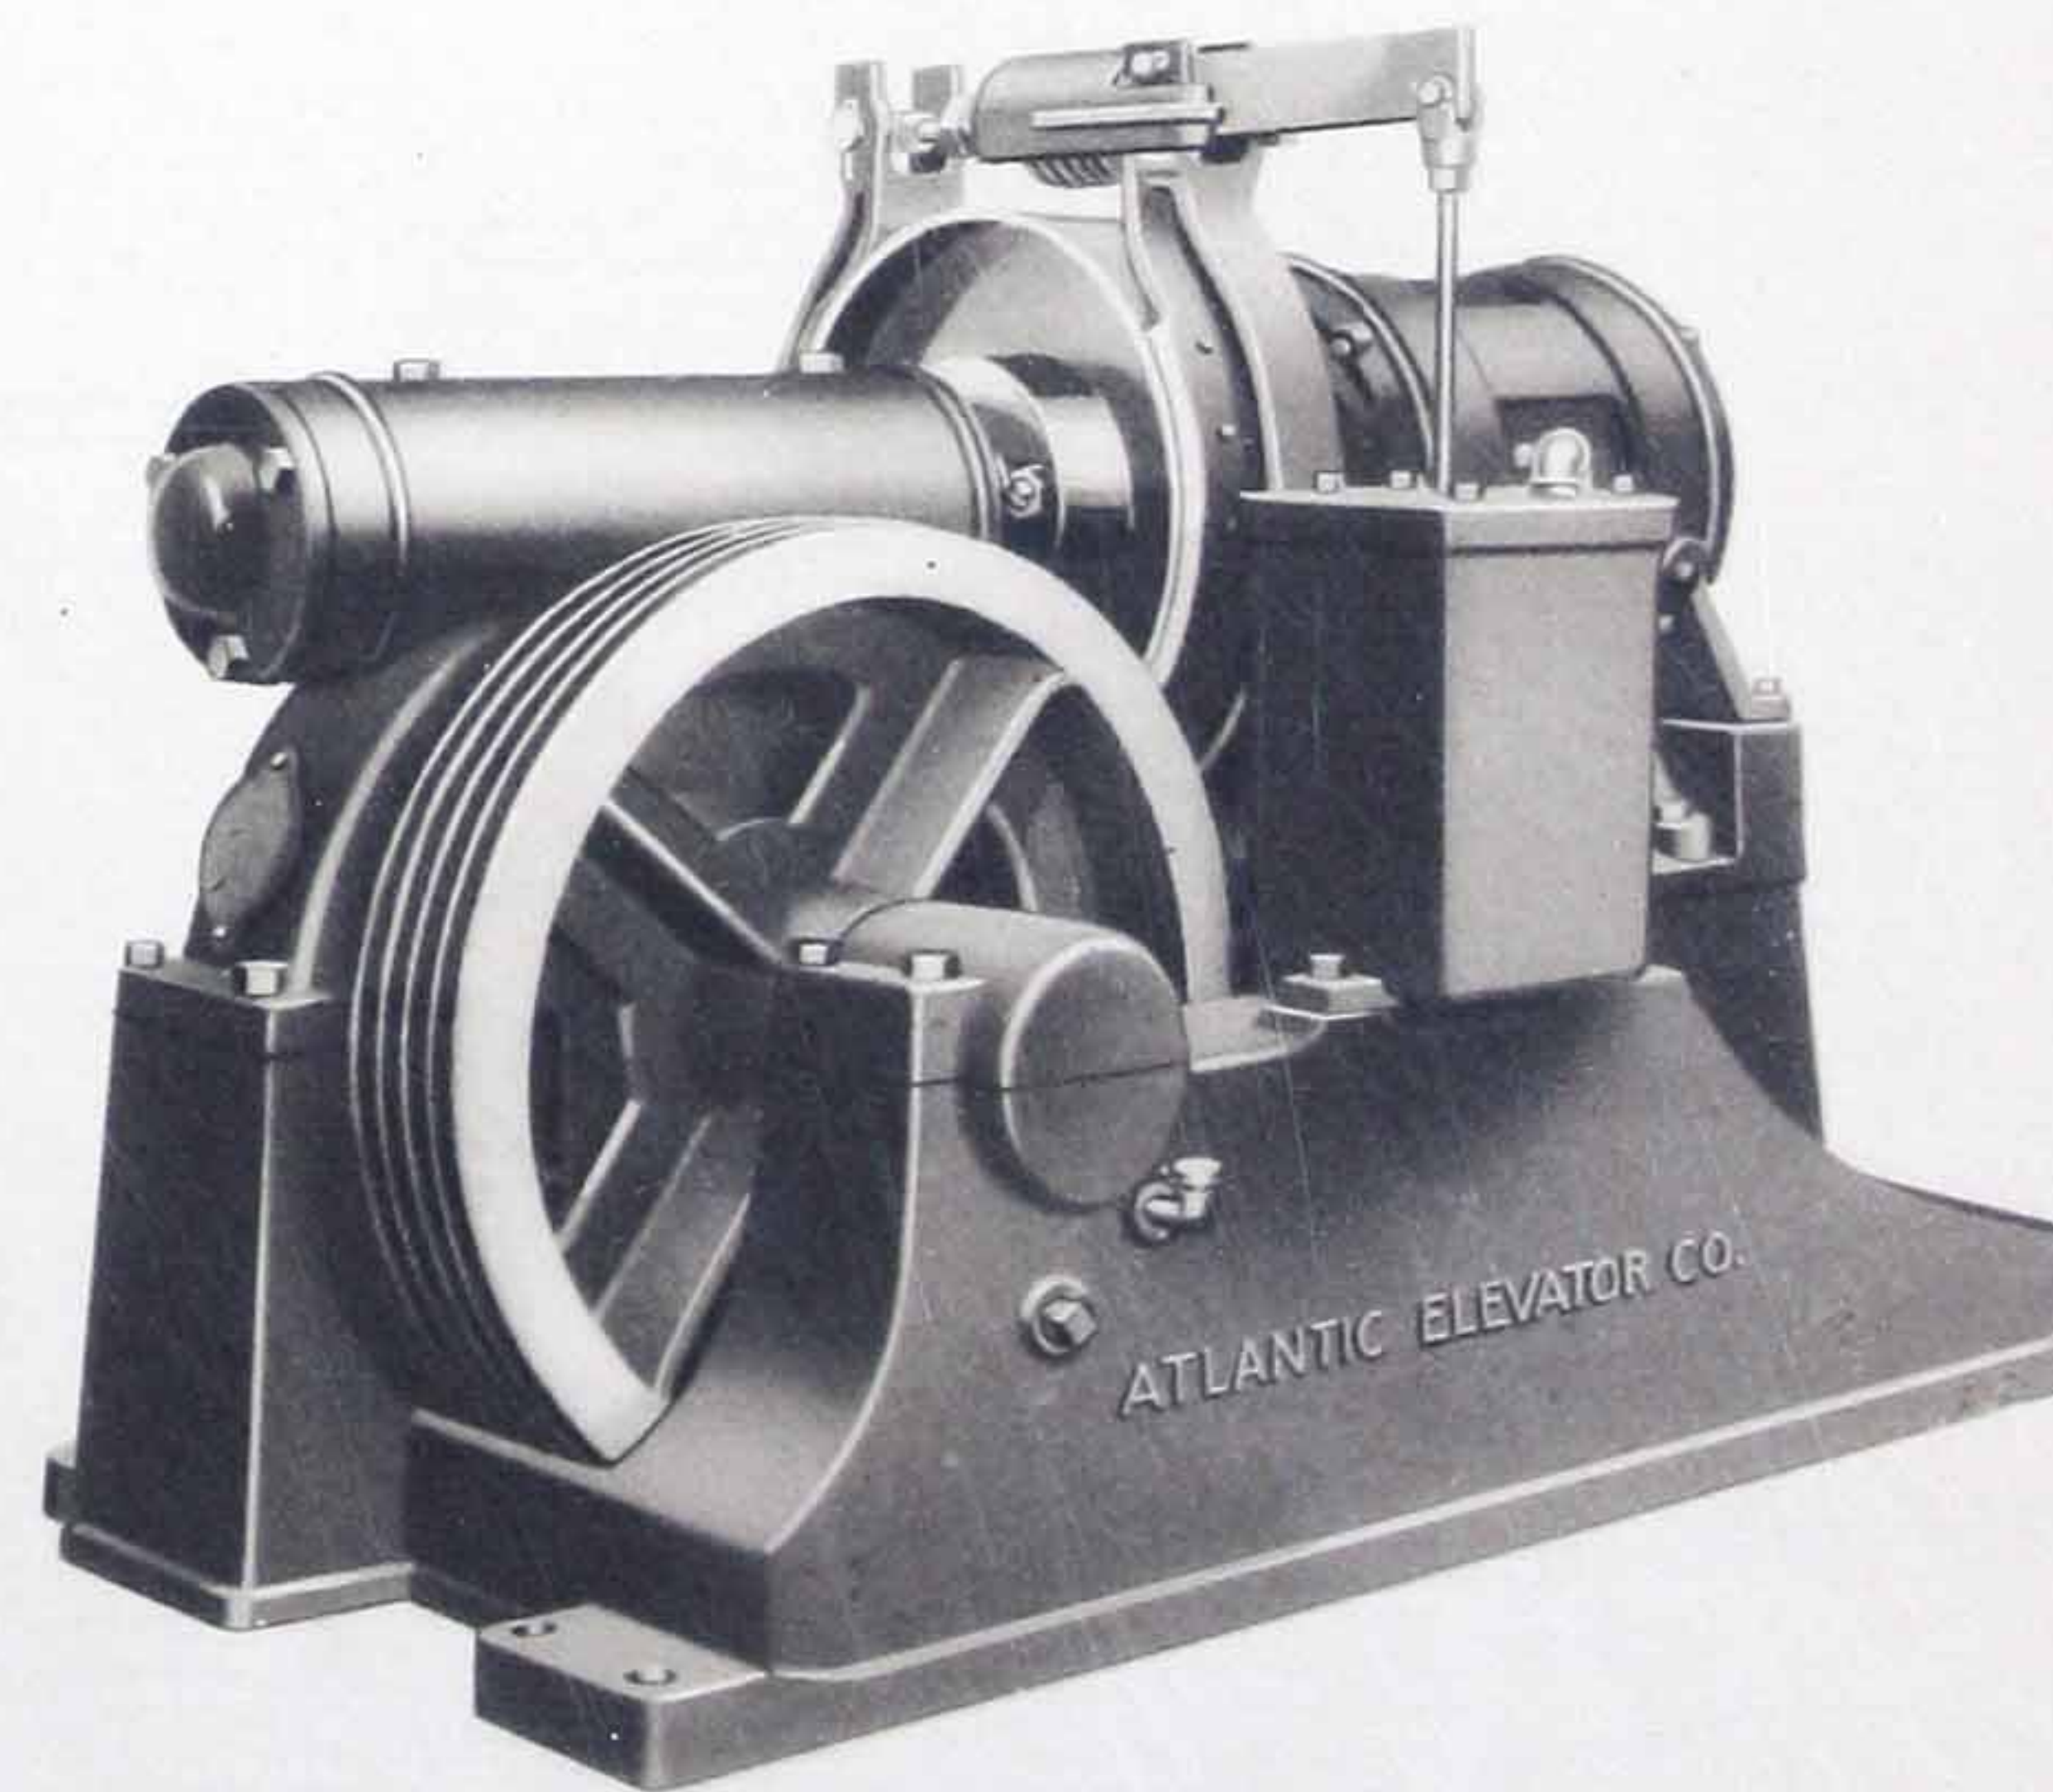

Modern large residences . . . for convenience . . . for better entertaining of guests . . . demand an elevator of greater duty. Such an elevator should carry at least six persons and should serve all floors from basement to roof. For this purpose we recommend the ATLANTIC.

Especially engineered to suit the particular residence . . . carefully planned from top to bottom . . . the ATLANTIC is completely a custom built residence elevator.

Its cab may be constructed of steel, ornamented in the modern tendency . . . or of the finest wood, carefully finished to rigid specifications. The control should be full magnetic type . . . and designed to give quiet and accurate operation. The shaftway doors may be either of steel or properly constructed wood to harmonize with the surroundings. Special interlocking equipment must be used. The machine should be of the single worm geared traction type and of ample capacity. Cables and safety devices must be in keeping with the greater duty and more exacting requirements of a large residence. Proper support of all load must be carefully engineered and planned.

To secure the best results, each elevator for this class of service must be given especial attention by our engineering department . . . specifications will be prepared by us to cover each of the particular features mentioned above . . . so that, when completed, such an installation will be a harmonious unit, custom built to meet the architectural and service requirements of the house.

Prices for the ATLANTIC start at \$2500.
